

## **Rule of Public awareness in making safe society**

This is a clear fact that all messengers of God have done their duties through giving information and speeches for the people, that was a sort of public awareness and they inform them from risks that they will face.

So in Natural Disaster Risk Reduction it is very cheap, fruitful, easy and useful to organize public awareness and clarify the hazards and vulnerabilities of the people.

Afghanistan National Disaster Management Authority ANDMA keeping in mind the importance of public awareness has organized many workshops, course and seminars regarding Disaster Risk reduction, equipments for preparedness, conducting rapid assessments, first aids, the cause of occurrence of natural disasters, vulnerabilities and saving yourself and others during disasters.

And many more subjects, the training process and launching workshops has been done in different provinces with the participations of officials form related organizations and civil society.

Recently this process is going on in some schools in Kabul city with cooperation of community disaster risk reduction program CDRRP/UNDP to train and inform teachers and students what they should do when earthquake happens.
